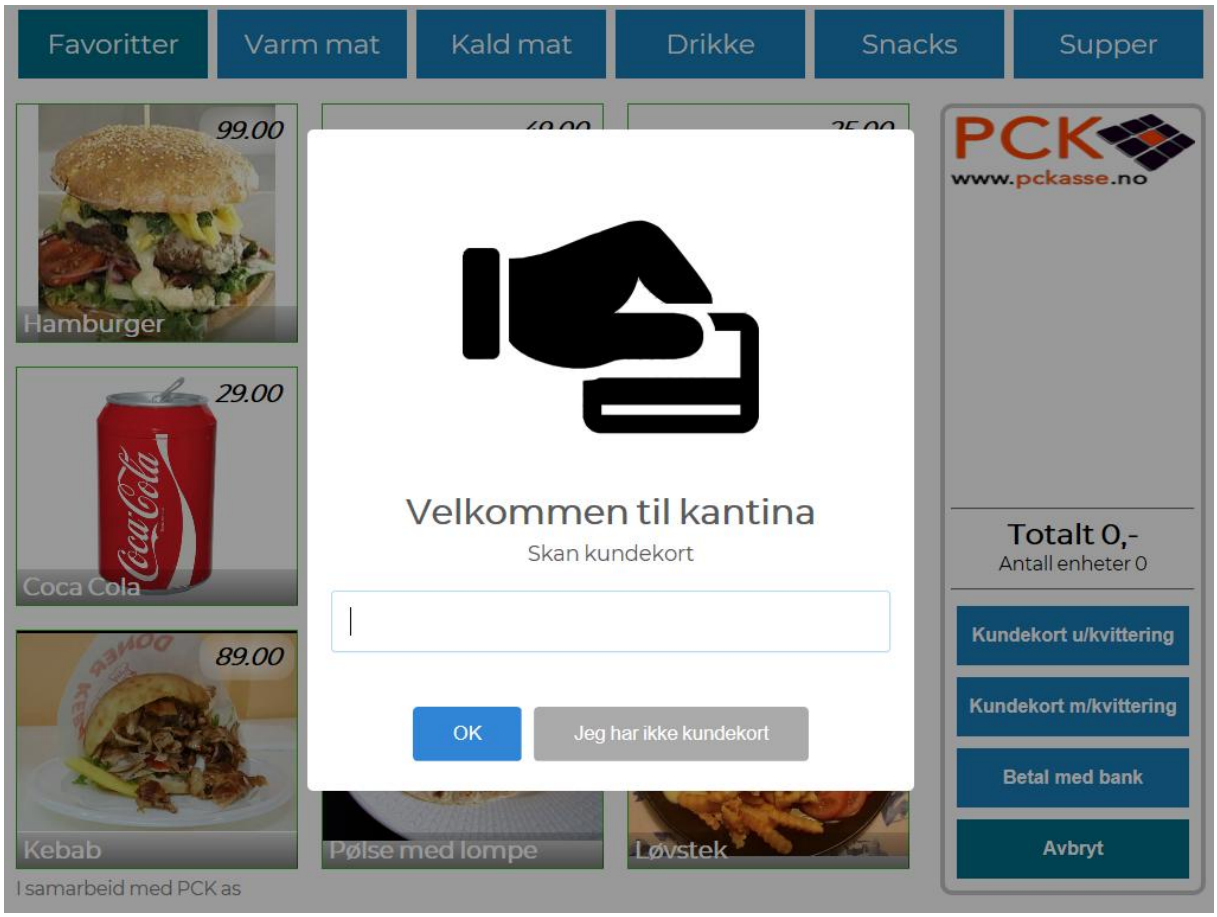
"Webregister" is opened as a full screen window in PCKasse. The webpage can interact with PCKasse through a set of functions and thereby act as a self-service cash register.



This way you can build your own self-service cash register styled to match your store colours, webpage or even change the mood to match the time of day.

Technical description:

Webregister API 3 is based on communicating with Pckasse the entire time and uses the order object to show the cart. This will result in correct prices for the current customer, and the possibility to delete individual order lines. This is also a better solution for weighing.

Use JavaScript window.external object to communicate with Pckasse from the webpage.
